Response to Arguments

Applicant's arguments filed July 13, 2006 have been fully considered but they are not persuasive.

Specification

The disclosure is objected to because of the following informalities:

In paragraph 0056 the term "more relatively highly effective" is not clear and awkwardly worded.

Paragraph 0061 references Fig. 2A. There is no such figure.

On page 14, reference character "215" has been used to designate both a reflective surface and arms of the handpiece.

Appropriate correction is required.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the optical energy source and electrical energy source and their delivery means must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the

Application/Control Number: 10/767,459

Art Unit: 3739

remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Fig. 4B has bars in the graph without labels.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 68-85 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 68 cites delivery of electrical energy via electrodes between which tissue has been collected and the delivery of optical energy to the surface of the collected tissue between the electrodes. No structure is disclosed for providing the optical energy under the electrodes. The drawings fail to show multiple energy sources with their respective delivery paths. Claim 75 likewise cites the delivery of optical energy to tissue collected between electrodes.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/767,459

Art Unit: 3739

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 69 and 71-72 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S.

Patent Application Publication US 2002/0143326 to Foley et al. Foley et al. teach an ablation template device that may include at least two electrodes that operate as part of a sensor (paragraph 0074). The electrodes measure impedance (paragraph 0076) and it is therefore inherent that an electrical voltage must be provided. The device may be an oval shape (Fig. 2), the oval forming a cavity within with a lumen that provides the leads for the electrodes (Fig. 2, # 18). The lumen forms the structure, its intended use does not impact the structure, and, therefore, the suction lumen is not given patentable weight. It is noted that a variant provides for a vacuum connection via a suction lumen (Fig. 9A) implying a suction source. An ablation energy source is provided (Fig. 2, # 22). The ablation source may be a laser (paragraph 0085), thus providing an optical energy source.

Claims 75, 76 and 82 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,772,597 to Goldberger et al. Goldberger et al. disclose a method and device for heating tissue to coagulate the blood. The method is disclosed as identifying a blood vessel and heating it between electrodes (Fig. 5, #'s 131 & 132) using RF energy (Valleylab Force B). A signal alerts the surgeon when this is complete based on detecting the disappearance of the spectral characteristics using a light source and detector (Fig. 5, #'s 145 & 146), thus transmitting optical energy to the tissue. The detecting step is based on reflected optical energy.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Application/Control Number: 10/767,459 Page 5

Art Unit: 3739

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Henry M. Johnson, III whose telephone number is (571) 272-4768. The examiner can normally be reached on Monday through Friday from 6:00 AM to 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C. Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
